

COFFS HARBOUR

Envirowalk Grating has been supplying our FRP Grating & **EnviroTreads** for countless projects throughout this amazing part of the NSW coast since 2008. The following Photos reveal just a few of these.

To meet the need for a combination of P5 anti-slip and comfort for wet bare feet Envirowalk Mini & Micro **EnviroMesh** panels and **EnviroTreads** were used for beach access and surf lifesaver viewing platforms. The fine barefoot friendly grit surface also reduces the risk of abrasions should a child run and fall on it.

EnviroGrate 38x38 grid has been used for most forest type locations such as the Coastal bush walk at right.

To create maximum longevity for facilities, all Envirowalk FRP Grating products are manufactured using only premium grade, unblended Type I (Iso) resin with ATH filler, maximum anti-UV, E-Glass fibres and fine grit P5 rated anti-slip surface.

Coffs Harbour City Council continue to buy and trust Envirowalk high quality FRP products.

Envirowalk PRODUCTS USED:

H30 (30mm thick) Mini and Micro **EnviroMesh** panels Type I resin, 10g UV9, ATH filler, E-Glass fibres with fine carborundum barefoot friendly grit anti-slip surface.

H40 (30mm thick) Mini and Micro **EnviroTread** steps and landing panels Type I resin, 10g UV9, ATH filler, E-Glass fibres with fine carborundum barefoot friendly grit anti-slip surface.
